

A9300

Full Height Turnstile

"Standard solution with a great value for money. The natural and cost-effective option for areas with high security needs"

A9300 SALFORD full height turnstiles are designed for fast and comfortable operation of the user in both directions. They are indicated for areas that require an access control, attended or unattended, with a high level of security, while generating a large deterrent effect to potential intruders.

Their architecture, designed for very different environments, both indoors and outdoors sheltered from the water is SMOOTH, QUIET, ROBUST and COMPACT.

They are equipped with preinstallation to enable INTEGRATION with any access control electronic devices of any identification technology or manual operation.

A9300 SALFORD full height turnstiles can operate in UNIDIRECTIONAL and BIDIRECTIONAL modes. Its robust and effective drum-shaped design allows the control of step one by one in places where there are intensive movements of people.

In the event of a power cut or power failure, the full height turnstile is unlocked allowing free exit. As an option, also has a ANTI PANIC system with automatic releasing, leaving free rotation for building evacuation.

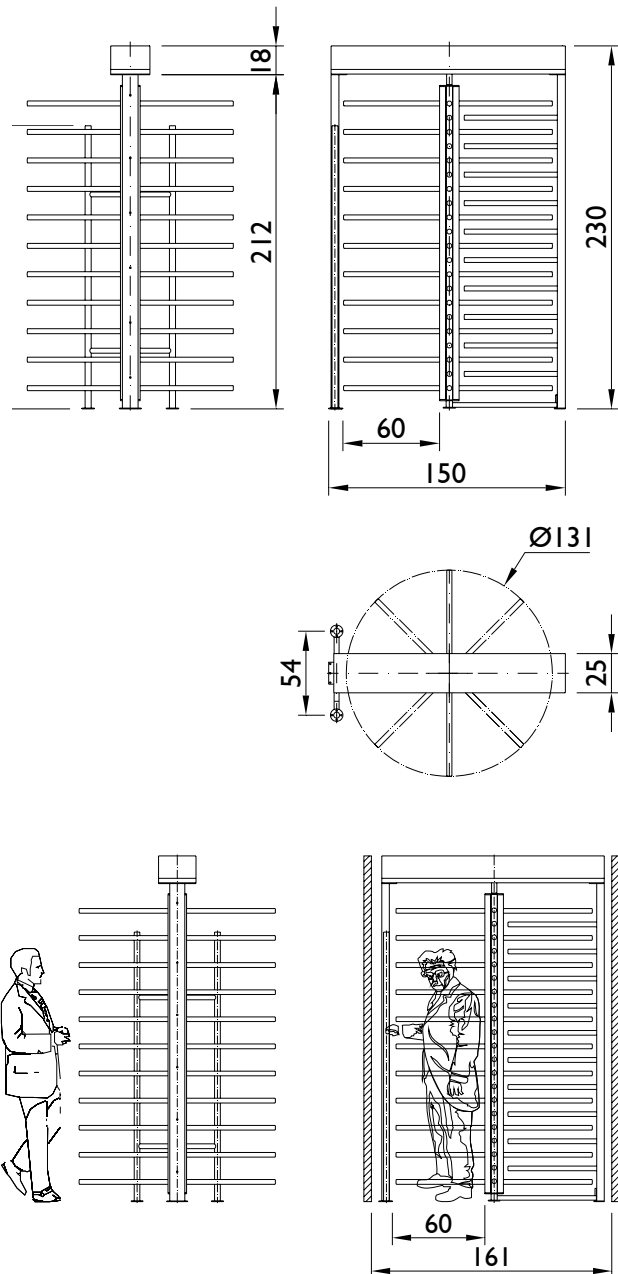

All components used in the manufacture of **SALFORD** products have been selected to achieve the best results in DURABILITY, STRENGTH and SAFETY.

Specifications

- **Power supply:**
110/230 V AC 50/60 Hz.
- **Consumption:**
50 W.
- **Operating temperature:**
-15°C a +60°C.
